Continuation of Substance of Interview including description of the general nature of what was discussed: Examiner contacted Applicants' representative to provide the reference Mohan to the representative for review. Examiner indicated that Mohan also teaches providing the LSN as a page identifier and updating it whenever the page is modified. The representative stated that the Mohan reference teaches a mehod for archiving files of modifiable pages in a log based phased commit transaction. It updates the page identifier when the page is changed. However, the reference does it at the page level and not at a RECORD level as with the current invention.

Examiner pointed out that it is unclear how the step of copying the selected data record could identify if that record has been modified since the time it was last copied. The representative proposed to amend the claim to recite copying the selected record and " the identifier of the data page" to further define the claimed limitation. The representative authorized the Examiner to enter the proposed amendment via an Examiner's amendment.
